

ANNUAL REPORT of VITAL STATISTICS

1965

**Commonwealth of Massachusetts
Department of Public Health**

PUBLIC DOCUMENT

NO. 1

THE COMMONWEALTH OF MASSACHUSETTS

DEPARTMENT OF PUBLIC HEALTH

Alfred L. Frechette, M.D.
Commissioner of Public Health

SECOND ANNUAL REPORT
OF

HEALTH STATISTICS OF MASSACHUSETTS

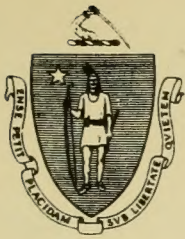

Births, Marriages, Deaths (Divorces and Population)

For the Year Ending December 31, 1965

Compiled by Paul D. Parker, Ed.D.
Director, Training and Research,
Acting Director, Health Statistics

Publication No. 920

Approved by Alfred C. Holland
State Purchasing Agent

The Commonwealth of Massachusetts

Department of Public Health

State House. Boston 02133

ALFRED L. FRECHETTE, M.D.
Commissioner

February 19, 1968

To the Honorable Senate and
House of Representatives

I have the honor to submit herewith, as required by Chapter 111, Section 2, of the General Laws, the one hundred and twenty-fourth Annual Report on statistics of births, deaths, marriages, and divorces, in Massachusetts for the calendar year 1965.

In accordance with Chapter 508, Acts of 1964, this is the second Annual Report of Vital Statistics published by the Department of Public Health, and is intended for administrative and research purposes connected with health programs and population studies.

The editorial review and presentation of statistical data were written by Paul V. Parker, Ed.D., Director of Training and Research, Acting Director of the Health Statistics Unit. Administrative assistance in the processing, editing, and compilation of computer output was prepared under the direction of Nancy N. Shaughnessy, Statistician. The presentation of tabular findings is restricted to utility within the meaning of the statute by authority of which the tables are prepared.

Respectfully submitted,

A handwritten signature in dark ink, reading "Alfred L. Frechette".

Alfred L. Frechette, M.D.
Commissioner

VITAL STATISTICS

INTRODUCTION

Massachusetts was one of the first colonies to recognize the importance of the registration of vital events, and as early as 1639 required the registration of births, marriages, and deaths. Since the year 1842, statutes have required city or town clerks to forward attested certified copies of original certificates to the office of the Secretary of State to be filed in a central registry. In 1964, the Legislature transferred certain duties relative to vital statistics from the Secretary of the Commonwealth to the Commissioner of Public Health for administrative, research, and reference purposes connected with health programs and population studies.

This is the second annual report of Vital Statistics produced by the Health Statistics unit of the Department of Public Health. These statistics represent an extension of a computer program developed for processing a data base of health information. It includes the capability of providing information on deaths due to any specific cause or causes of death, and provides tabular findings for deaths by age groups, sex, color, and marital status.

Tabulations are based primarily on resident data rather than place of occurrence of event. For historical and demographic purposes there are general reference tables where both occurrence and residence data are reported.

The completeness of this data is satisfactory for births, deaths, and marriages, but not for fetal deaths and divorces. There are limitations in the methods used for retrieving and processing vital statistics which should be considered in respect to use of the findings. The quality of the data is dependent upon multiple variables ranging from those who furnish, record, transcribe, and transmit information to those who code, query, keypunch, verify, machine-process, and publish the final statistics. Despite these limitations, the data of this report is assumed to be both valid and reliable, based upon an elaborate "error-check" program which substantiated the conscientious effort of the Health Statistics unit.

Requests for more detailed or specific findings should be sent to the Health Statistics unit, Department of Public Health, State House, Boston, Massachusetts.

SOURCES OF INFORMATION

Births

City or town clerks in each of the 351 Massachusetts communities receive or obtain and record the following facts relative to births in their city or town. The record of birth shall include: date of record, date and place of birth, name, sex, and color of child, names, places of birth, and residences of parents, including the maiden name of mother, and occupation of father. In the record of birth of an out-of-wedlock child, the name and other facts relating to the father is not recorded except on the written request of both father and mother.

Precedence for the reporting of all births to city or town clerks dates back to statutes passed in 1841, and the following procedures are now in effect to accomplish that end:

1. Every physician or hospital medical officer, except in cases where a child is born dead, shall within fifteen days after such birth report the facts of record...(15 days)
2. Parents within forty days after the birth of a child, and every householder, within forty days after a birth in his house, shall cause notice thereof to the clerk of the town where such child is born...(40 days)
3. The Director of the Division of Child Guardianship in the Department of Public Welfare, within forty days after the delivery or commitment of an abandoned child or foundling to said Department, shall cause notice of the birth of such child or foundling to be given to the clerk of the town wherein such child was found...(40 days)
4. The keeper, superintendent or person in charge of a house of correction, prison, reformatory, hospital, infirmary or other institution, public or private, shall on or before the fifth day of each month give notice to the town clerk of every birth among the persons under his charge during the preceding month...(30 days)

Upon receipt of notification of births occurring in his town, each of the city or town clerks is required to forward attested certified copies of the original certificates to the central registry in the Office of the Secretary of State. Note that periods of time ranging from fifteen to forty days have elapsed from the time of birth to the next phase of process:

1. Upon receipt of the facts of the record of birth, the clerk mails to the parent(s) a form for return for the purposes of verifying, modifying, or completion of the facts of record therein and upon receipt of such return shall file the same with the original return...etc.
2. In cities or towns of not more than 90,000 population, clerks are required to forward attested copies to the Office of the Secretary of State, within 60 days following every month in which births occurred.
3. In cities or towns of more than 90,000 population, clerks are required to forward attested copies to the Office of the Secretary of State, within 90 days following every month in which births occurred.

Each year more than 99 per cent of all births occur within hospitals accredited by the Department of Public Health, and a system which involved direct hospital reporting of births to the Department of Public Health, would accelerate the processing of health information.

Resident Live Births and Fetal Deaths
by Place of Delivery

<u>Place of Delivery</u>	<u>Live Births</u>	<u>Fetal Deaths</u>
Hospital	100,082	1,276
Other and not stated	180	21
Total	100,262	1,297

Deaths

Hospital and other institutions are required to obtain, when persons are received, the facts which are required for record in the deaths of such persons.

Registration is accomplished by filing a standard death certificate, medical examiner's death certificate, or fetal death certificate, with the local board of health, which in turn transmits the certificates to the city or town clerk.

The clerk of each city and town is required to transmit on or before the tenth day of every month to the Secretary of State, upon forms furnished by him, certified copies of the records of deaths occurring during the preceding month, or in case no such deaths have occurred, a certificate of such fact...(and) the Office of the Secretary in a reasonable time shall make the birth, marriage, and death records available to the Department of Public Health.

Deaths investigated by medical examiners are based upon deaths supposedly due to violence or where no physician has been in attendance. These include deaths caused by the action of chemical, thermal, or electrical agents, or following abortion, or from diseases resulting from injury or infection related to occupation, or suddenly where not disabled by recognizable disease, and those of persons found dead.

Fetal Deaths

Town clerks record certificates of fetal deaths in the same manner as death certificates. When a child is born dead, after a period of not less than 20 weeks' gestation, the physician in attendance at birth of such child shall furnish for registration at the request of an undertaker, or other authorized person, or any member of the family of the deceased, a certificate of fetal death.

Marriages

Persons intending to marry must file notice of intention to marry not less than three (3) days prior to the marriage with the clerk or registrar of the city or town where they respectively dwell if both dwell within the Commonwealth; or if they do not dwell within the Commonwealth, with the clerk of city or town where they intend to marry. The notice must contain the facts required for the record and be sworn to by each of the parties of the marriage.

1. The public registration of records of marriages are made in the first instance in the cities and towns of the state where the contracting parties dwell, and if the ceremony is solemnized in a town other than where the parties reside, in the town where the ceremony is performed.
2. The clergyman or other authorized person who performs the ceremony, must complete the marriage certificate with information required (Section 1, Chapter 46), and send a copy of such certificate to the clerk of the city or town where the bride resides, the clerk of the city or town where the groom resides, and the clerk of the city or town where the marriage is performed.
3. The city or town clerk receives and records the marriage certificate:
 - A. If the bride is a resident of Massachusetts, the city or town clerk of the city or town where the bride resides returns a copy to the Secretary of State, however,
 - B. If the bride is not a resident of Massachusetts and the groom is a resident of Massachusetts, then the clerk of the city or town of the groom's residence returns a copy to the Secretary of State, however,
 - C. If neither the bride nor the groom is a resident of Massachusetts, the clerk of the city or town where the marriage takes place returns a copy of the certificate to the Secretary of the Commonwealth.

Editor's Notes:

- Births** - The present framework is such that births of children born in cities the size of Boston, Worcester, or New Bedford are registered in the Office of the Secretary approximately three months after the event, and records forwarded from some of the other large cities have taken four to six months to complete the registration process.
- Deaths** - These certificates are processed within a reasonable period of time, approximately thirty days, but the death certificates do not conform with recommended standard forms of the National Center for Vital Statistics.
- Fetal Deaths** - These deaths are reported after 20 weeks gestation by physicians at the request of authorized persons, and therefore, they are sporadic, and inconsistent with the expected number of fetal death in a state with a population as large as Massachusetts.
- Marriages** - Legislation requires the reporting to the Office of the Secretary by the tenth day of the month following the event (approximately 60 days). Marriages, like births and deaths, should be reported from place of occurrence, which might eliminate duplication of reporting and/or the present need for an elaborate cross-checking system.

Recommendations:

1. That methods be devised for meeting regional and national statistical needs through certificate format changes, and changes in the reporting of events, and
2. That birth, death, fetal death, and marriage certificates be accompanied by a confidential section for statistical and administrative purposes, and
3. Provisions be made for medical examiner certification on fetal death certificates, and
4. Provisions be made for divorce records from Massachusetts to be included in the Divorce Registration on the national level.

DEFINITIONS

Residence is defined as that of the deceased for a death, and that of the mother for a birth or fetal death. Residents from other states who have lived in Massachusetts for more than one year are considered residents of this state, except in those cases of deaths within resident institutions, regardless of the length of stay within the institution. Former residents of Massachusetts who have been absent more than one year are no longer considered residents of this state.

Live Birth is considered the complete expulsion or extraction from its mother of a product of human conception, irrespective of the duration of pregnancy, which following expulsion or extraction breaths or shows any other evidence of life such as beating of the heart, pulsation of the umbilical cord, or definite movement of voluntary muscles whether or not the umbilical cord has been cut or the placenta is attached.

Immature Birth is considered as one for which the birth weight is 2500 grams (5 pounds 8 ounces) or less, regardless of the period of gestation.

Neonatal death is the death of a child occurring during the first twenty-eight days of life.

Infant death is the death of a child under one year of age.

Fetal death is the death of the product of conception prior to the complete expulsion or extraction from its mother, irrespective of the duration of the pregnancy. The death is indicated by the fact that after such expulsion or extraction the fetus does not breathe or show any other evidence of life such as beating of the heart, pulsation of the umbilical cord, or definite movement of voluntary muscles.

Underlying cause of death is defined as the disease or injury which initiated the sequence of morbid events leading directly to death, or the circumstances of the accident or violence which produced the fatal injury. The responsibility for indicating the underlying cause of death is that of the certifying physician or medical examiner.

INTERPRETATION OF DATA

Population

The Massachusetts State census of 1965 reported a total population of 5,295,281, comprised of 2,567,037 males and 2,728,244 females. There were 100,262 resident births and 58,583 resident deaths, resulting in a natural increase of 41,409 for the year 1965.

There has been a continued growth of the middle and older age population within the Commonwealth, probably resulting from a relatively stable death rate of 11 per 1,000 population, coupled with a decreasing number of births each year during the past 10 years. In 1965, the number of resident live births was the lowest recorded in fourteen years.

Resident Births and Deaths

Last Three Census Years					
Year	Births	Rate per 1,000 Population	Deaths	Rate per 1,000 Population	Natural Increase
1965	100,262	19	58,853	11	41,409
*1960	114,018	22	56,560	11	57,458
1955	109,610	23	53,386	11	56,224

* Federal Census Reports

The following table summarizes the vital events reported for Massachusetts in the calendar year, 1965.

Summary Table

Recorded Events By Residence	Total	Male	Female	Unknown, or Sex Not Stated
Live Births	100,262	51,598	48,663	1
Deaths (including infant and neonatal)	58,853	31,290	27,563	-
Infant (including neonatal)	2,221	1,262	959	-
Neonatal (under 28 days)	1,692	968	724	-
*Fetal Deaths	1,297	684	602	11

*Those occurring to Massachusetts residents, while out of State, are not included.

Recorded Events by Occurrence

Marriages	38,281
Divorces	7,728

Births

There is a need for more accurate and complete information about births and deaths if there is to be progress in reducing mortality and morbidity in the Commonwealth. If planning and implementing programs are to consider the effects of socio-economic and demographic factors, then there is a need for interdisciplinary and inter-agency cooperation in the design and use of data collection.

The Health Statistics Unit has developed some computer programs including maternal and child health information. The limitations of the present system of retrieving information precludes and excludes areas of major concern to Public Health. These programs were therefore limited to combinations of resident live births and fetal deaths with respect to weight of infant, age and color of mother.

Findings indicate that:

1. Approximately five percent (5%) of total live births, and seven percent (7%) of fetal deaths were classified to "non-white" mothers.
2. The reporting of fetal deaths (20 weeks' gestation or more) was inadequate in numbers for a population the size of Massachusetts, yet, despite this fact, the total death rate reported for the "non-white" mothers was almost twice that of the "white" mothers.
3. There were forty-one births to females age fourteen or less, and thirty-seven percent (37%) were classified as "non-white".
4. There was 7,724 low birth weight and/or "immature" children (2500 grams or less) born in 1965. The "non-white" which represented only five percent (5%) of the total births were recorded with eight percent (8%) of the low birth-weight children.

5. Other "high-risk" mothers are those who give birth beyond the age of thirty-four, with histories of previous complications in difficult pregnancy, and/or those of this age group who, while pregnant, live under adverse socio-economic conditions. In 1965, approximately twelve percent of the total births, (12,082) were recorded for women age thirty-five and above, and of this number three percent (3%) were classified as "non-white".

In summary, classification by birth-weight of child, age and color of mother, has emphasized the need for implementation of programs in maternal "high-risk" areas. If there is to be a better understanding of fetal death rates, and low birth-weight babies, then the need for obtaining presently unobtainable socio-economic data must be resolved.

Deaths

There was a total of 58,853 resident deaths reported in 1965, of which 31,290 male deaths outnumbered 27,563 female deaths by 3,727. There were more male deaths than female in every age bracket of five-year intervals from birth up to age seventy-five.

Percentages of total deaths by age group indicate that:

1. The majority of all deaths (56%) occurred within the population age seventy and above,
2. Two-thirds of all deaths (67%) occurred within the population age sixty-five and above; and
3. Three-fourths of all deaths (75%) occurred within the population age sixty and above,
4. Excluded are 25 deaths for which age was not stated

Some of the findings for resident deaths by marital status, sex, and age-group were as follows:

1. There were 11, 152 deaths of single individuals distributed across all age groups, of which 5,752 were male and 5,400 female. In the prime "marriageable years" of 20-39, there were twice as many deaths to single men (401) as single women (169).
2. More than twice as many resident married men (17,833) as married women (7,805) were reported as having expired in 1965.
3. More divorced males (1,055) than divorced females (634) died in 1965.
4. The full impact is reflected in the findings for the widowed populations, in which the female deaths (13,684) were twice as many as the male (6,532).

A more definitive evaluation of the death statistics is revealed in the findings for fifteen selected causes by international list code numbers and the tables for the five leading causes of death for each age group.

1. Heart Disease Deaths (code numbers 400-402, 410-443) totaled 24,273 or 41% of all deaths recorded in 1965. In age brackets of ten-year intervals beginning with age thirty, arteriosclerotic and degenerative heart disease (420-422) was a leading cause of death for all ages, and beginning with age 40 was the leading cause of death.
2. Malignant neoplasms, (cancer, detailed list numbers 140-245), including neoplasms of lymphatic and hematopoietic tissues totaled 10,260 deaths or 17% of the deaths recorded for the year. It was one of the five leading causes of death for all age groups recorded, and was the leading cause of death in the 5-9, 10-14, and 30-39 age groups.
3. Vascular lesions affecting the central nervous system (detailed list numbers 330-334) totaled 6,035 deaths. This group represented 10% of the total deaths, and was the third leading cause of death in the Commonwealth.
4. Accidental deaths (detailed list numbers 800-802, 840-962) are treated separately from motor vehicle accidents in the tables for the five leading causes of death by age groups. They are combined and classified by type of accident, age group, and sex in a separate table. Of major concern for Public Health is the finding that non-motor vehicle accidents were one of the five leading causes of death for all age groups up to age fifty, and above age seventy-nine as well. This group was the leading cause of death for youngsters ages 1-4, and was tied with cancer as a leading cause of death for the ages 5-9 during 1965.
5. Motor vehicle accidents (detailed list numbers 810-835) compiled independently from other accidents in the tables for the five leading causes of death for all age groups was the leading cause of death for teenagers (15-19) and young adults (20-29), and was one of the five leading causes of death for all age groups up to age forty, except for infant deaths.
6. Suicide and self-inflicted injury (963,970-979) was once again one of the five leading causes of death for the teenage group (15-19); the young adult group (20-29); and the young middle-aged group of (30-39). This hidden statistic when viewed in relation to total deaths reflects a relatively small number, yet each year approximately the same percentage of total deaths (.008%). Noteworthy is the fact that at least twice as many males as females were reported as suicides in each of the last five years.

Mortality findings from fifteen selected causes of resident deaths in Massachusetts were developed for each of the cities and towns of the Commonwealth. Findings for 1965 were similar to those of 1964 with no major differences.

Mortality From 15 Selected Causes
of Resident Deaths by Percentages
Massachusetts 1965

Selected Causes of Death	International List Number	Total Deaths	Percentages of Deaths
1. Disease of the Heart	400-402, 410-443	24,273	41.2
2. Malignant Neoplasms, etc.	140-205	10,260	17.4
3. Vascular Lesions, etc.	330-334	6,035	10.3
4. Influenza and Pneumonia, etc.	480-493	2,612	4.4
5. All other Accidents	800-802, 840-962	1,702	2.9
6. Certain Diseases of Early Infancy	760-776	1,415	2.4
7. General Arteriosclerosis	450	1,166	2.0
8. Diabetes Mellitus	260	1,040	1.8
9. Cirrhosis of the Liver	581	1,029	1.7
10. Other Diseases of Circulatory System	451-468	1,013	1.7
11. Motor Vehicle Accidents	810-835	918	1.6
12. Congenital Malformations	750-759	532	.9
13. Suicide	963,970-979	446	.8
14. Other Hypertensive Disease	444-447	366	.6
15. Symptoms, Senility and Ill Defined Conditions	780-795	257	.4
All other causes adjusted		<u>5,789</u>	<u>9.9</u>
Totals		58,853	100.0

Infant Mortality

A total of 2,221 deaths of children below age one were recorded in 1965, with almost 90% of the deaths accounted for in the table for five leading causes of deaths by age group. Neonatal deaths (under 28 days) numbered 1,692, of which more than half (971) died during the first day of life, and more than 90% (1,550) died during the first week of life. Total resident deaths under 28 days (neonatal) and under one year, have been compiled by sex for counties, cities and towns.

Editor's Note

Research workers in mortality study areas, may apply to the Health Statistics Unit for more detailed descriptions of specific cause of death findings. As noted earlier, access to such information is possible with the new computer programs written for the 1965 Annual Report within the meaning of the statute by authority of which the tables have been prepared.

Fetal Deaths

Only 1,297 fetal deaths were reported for Massachusetts residents in 1965, and of this number all but 21 were reported by hospitals. Estimates by some Public Health officials are that as many as one million fetal deaths occur in the United States yearly, and that as such, this area is a major Public Health concern.

Despite the insufficient reporting of fetal deaths by physicians outside of hospitals, the findings for 1965 indicate that:

1. A disproportionate number of fetal deaths occurred in the "high-risk mother groups" (260) and
2. The ratio of fetal deaths to 1,000 live births in the prime child-bearing years of 20-29, was for "non-white" mothers (19.7) more than twice that of "white" mothers (9.4).

Marriages

The number of marriages recorded in Massachusetts for 1965 totaled 38,281 or an increase of 2,509 marriages above the previous year. Of the total marriages, 39 percent involved one non-resident partner with a Massachusetts resident. There were 14,034 marriages which involved resident brides and grooms, and 2,883 marriages of resident grooms with non-resident brides, and 12,004 marriages of resident brides and non-resident grooms. Approximately, one-fourth of the total marriages (9,360) were composed of both bride and groom non-residents.

1. There were 30,664 marriages solemnized in which this was the first marriage for both bride and groom.
2. There were 4,978 women and 5,016 men who were recorded for second marriages.
3. There were 511 brides and 437 grooms involved with their third marriage ceremony.
4. There were 43 brides and 32 grooms who tried marriage for the fourth time, and
5. There were 5 brides and 1 groom who said "yes" for the fifth time.

Some extremes to consider:

- a. There were 13 girls age fourteen or less married in 1965,
- b. More than three thousand (3,292) teenage marriages,
- c. In the golden years of seventy and above, 99 brides and 332 grooms, of whom 3 women and 13 men were married for the first time.
- d. In the widowed populations, 1,638 women and 1,763 men remarried.
- e. In the divorced populations 3,899 women and 3,723 men married again. It is interesting to note, however, that 61% of the grooms and 73% of the brides who were divorced and remarried, were also below forty years of age.

Divorces

In Massachusetts 7,728 divorces were reported as granted by the County Probate Courts in 1965, as compared with 7,378 reported in 1964. There were 130 annulments granted as well. Historical comparisons of divorces granted by county, by cause, as well as divorces and annulments by party to whom granted, and by duration of marriage were tabulated.
